

Express2

Middleware

```
//creating middleware use app.use();  
//it takes a arrow function which takes 3 parameters  
//next tells node that function is over and to continue with execution  
//If next is not called, app will keep loading and not display anything  
app.use(express.static(__dirname + '/eg'));  
app.use((req,res,next) => {  
  var now = new Date().toString();  
  var log = `${now}: ${req.method} ${req.url}`  
  console.log(log);  
  fs.appendFile('server.log',log + '\n', (err) => {  
    if(err)  
    {  
      console.log('Unable to append to server.log');  
    }  
  });  
  next();  
});
```
