Express3

Using variables in url

```
//var in url is stored in req.params.varname
//variable is added in route like ":varname"

app.get('/user/:name',(req,res) => {
let user = req.params.name;
res.send('<h1>'+user+'</h1>');
});

app.listen(3000,() => {
console.log('server started at 3000');
})

//use url - http://localhost:3000/user/akash
op- we get akash in h1
```

BodyParser

```
BodyParser is used to take form info submitted by post method

//Require bodyparser
const bodyParser = require('body-parser');

//Add bodyparser middlewares
app.use(bodyParser.json());
app.use(bodyParser.urlencoded({extended:false}));

//Use post method
app.post('/subscribe',(req,res) => {
//name and email comes form name html prop
let name = req.body.name;
let email = req.body.email;
console.log(name + 'has subscribed with ' + email);
});
```

Download pdf

```
app.get('/downloads',(req,res) => {
res.download(__dirname + '/downloads/abc.pdf');
});
//store pdf in downloads/
```
